Rx939 LINER

This is a WHITE SYRINGE.  
DIPHThERIA/TETANUS/ACellular PERTUSSIS VACCINE - INJECTION - (dip-THER-ee-white-ur-us-per-TUSS-iss)  
COMMON BRAND NAMES: Adacel, Boostrix  
USES: This vaccine is used to keep up protection (immunity) against diphtheria, tetanus (lockjaw) and pertussis (whooping cough) in children and adults who have been vaccinated for these diseases in the past. Vaccination is the best way to protect against these life-threatening diseases. Vaccines work by causing the body to produce its own protection (antibodies). Booster doses are needed to keep up immunity because antibody levels may become too low over time to provide the needed protection.  
HOW TO USE: Read all vaccine information available from your health care professional before receiving the vaccine. If you have any questions, ask your health care professional. This medication is given by injection into a muscle by a health care professional. It is usually given in the upper arm. This vaccine may be given at the same time as other vaccines (such as hepatitis B) using a separate needle and injection site.

**SIDE EFFECTS:** Pain, swelling, or redness at the injection site may occur. Headache, tiredness, body aches, nausea, diarrhea, fever, chills, vomiting, or sore/swollen joints may also occur. Acetaminophen or ibuprofen (non-aspirin) may be used to reduce soreness. If any of these effects persist or worsen, tell your health care professional promptly. Infrequently, temporary symptoms such as fainting/dizziness, lightheadedness, vision changes, numbness/tingling, or seizure-like movements have happened after vaccine injections. Tell your health care professional right away if you have any of these symptoms soon after receiving an injection. Sitting or lying down may relieve symptoms. Remember that your health care professional has prescribed this medication because he or she has judged that the benefit to you is greater than the risk of side effects. Many people using this medication do not have serious side effects. Tell your health care professional right away if you have any serious side effects, including: high fever (higher than 104 degrees F/40 degrees C), muscle weakness, difficulty breathing. A very serious allergic reaction to this drug is rare. However, get medical help right away if you notice any symptoms of a serious allergic reaction, including: rash, itching/swelling (especially of the face/tongue/throat), severe dizziness, trouble breathing. This is not a complete list of possible side effects. If you notice other effects not listed above, contact your health care professional. Contact the health care professional for medical advice about side effects. The following numbers do not provide medical advice, but in the US you may report side effects to the Vaccine Adverse Event Reporting System (VAERS) at 1-800-822-7967. In Canada, you may call the Vaccine Safety Section at Public Health Agency of Canada at 1-866-844-0018.

**PRECAUTIONS:** Before receiving this vaccination, tell your health care professional if you are allergic to it; or to any other vaccines; or if you have any other allergies. This product may contain inactive ingredients (such as latex), which can cause allergic reactions or other problems. Talk to your health care professional for more details. Before receiving this vaccine, tell your health care professional your medical history, especially of: nervous system disorders (e.g., seizures, encephalopathy, Guillain-Barre syndrome), current illness/infection, bleeding disorders, immune system disorders (e.g., autoimmune disorders, radiation treatment), vaccination history including previous reactions to any vaccines. This vaccine should be used only when clearly needed during pregnancy. Discuss the risks and benefits with your health care professional. It is unknown if this vaccine passes into breast milk. Consult your health care professional before breast-feeding.  
**DRUG INTERACTIONS:** Drug interactions may change how your medications work or increase your risk for serious side effects. This document does not contain all possible drug interactions. Keep a list of all the products you use including prescription/nonprescription drugs and herbal products) and share it with your health care professional. Do not start, stop, or change the dosage of any medicines without your doctor's approval. Some products that may interact with this vaccine include: "blood thinners" (e.g., warfarin), corticosteroids (e.g., hydrocortisone, prednisone), cancer chemotherapy, drugs that suppress the immune system (e.g., cyclosporine, tacrolimus), other vaccines (e.g., diphtheria/tetanus toxoids).  
**OVERDOSE:** Not applicable.  
**NOTES:** Not applicable.

There are various combinations of vaccines available. Based on your age, vaccination history, and previous reaction to vaccines, your health care professional will determine the most appropriate one for you. Discuss the risks and benefits of vaccination with your health care professional. History of infection with tetanus or diphtheria does not always protect against future infections with these bacteria. You should still receive this vaccine if your health care professional orders it for you.  
**MISSED DOSE:** It is important to receive each vaccination as scheduled. Be sure to make a note of when the vaccination was last given for your medical record.  
**STORAGE:** Store in the refrigerator. Do not freeze. Keep all medications away from children and pets. Do not flush medications down the toilet or pour them into a drain unless instructed to do so. Properly discard

**IMPORTANT DISCLAIMER:** The side effects listed above are not all of the possible risks that could be caused by this medication. For further information, please consult with your physician about the uses, precautions and risks of the medication specific to your health. This information is obtained from First DataBank for use as an educational aid.
